

# Install LEGO Digital Designer

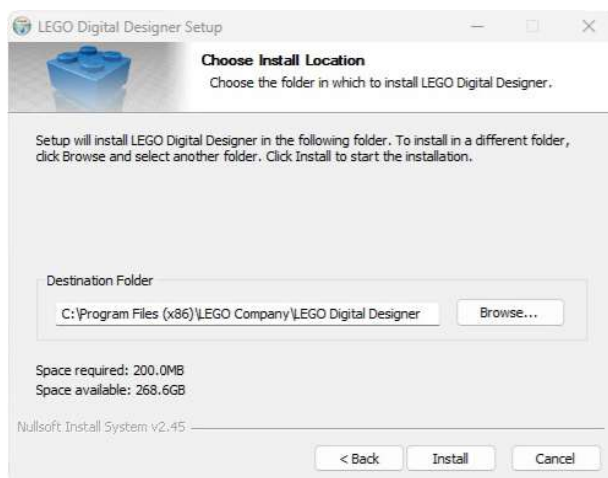

Ever since The LEGO Group officially retired LEGO Digital Designer in January 2022, CustomLDDUpdates has been your go-to location for a continuous source of new LEGO parts and decorations.

The final breath of LEGO Digital Designer was update 4.3.12, released in late 2019. This update aimed to remove the online connection, but came with its own quirks. The LEGO Digital Designer installer could no longer install Flash Player, leaving fans without their beloved digital building program. This manual will guide you through the installation of LDD 4.3.11. Please follow the steps below.

1. Download the LDD 4.3.11 setup from CustomLDDUpdates.com (go to **How to get started**).
2. Start **LDDSetup.exe**. The installer will give an error message stating that Adobe Flash player should be installed. Press **'Yes'**.

3. Select the installation folder:

4. When asked to **Run LEGO Digital Designer**, make sure the checkbox is ticked! This will create the LEGO Digital Designer asset folder.
